Certificate: **31-C-0268**

Site: 001

Ohio Wildlife Center

Type: ROUTINE INSPECTION

Date: 27-APR-2026

3.125(a) Critical

Facilities, general.

An outdoor housing facility did not protect an animal from injury. On 3/9/2026, the facility states an adult male coyote was found to have sustained injuries to both right legs. The facility believes this was caused when wild coyotes were able to interact with the animal through the metal chain link fencing of the enclosure. The incident caused a section of fencing to be noticeably bent outwards. The facility did seek veterinary care for the animal but the injuries sustained did result in the animal being euthanized.

The facility believes the wild coyotes were able enter the facility by traversing up the ravine behind the enclosure. While there is a fence between the ravine and the enclosure, it is not continuous and ends near the double entry gate to the enclosure and this is the area the facility states they feel the wild coyotes gained entry into the facility. Failure to protect animals from injury can result in stress, pain, and injury to regulated animals. Correct by ensuring that the facility is constructed of such material and of such strength as appropriate for the animals involved. The outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury. Correct by 11-MAY-2026.

3.127(d)

Facilities, outdoor.

The facility houses an Eastern Fox Squirrel in an outdoor enclosure and does not have a perimeter fence on several sides. The facility does have a perimeter fence variance but this species is not covered in the approved variance. Failure to provide an appropriate perimeter fence may result in animal escape or allow persons or other animals to interact with the regulated animals. All outdoor housing facilities must be enclosed by a perimeter fence that is of sufficient height to keep animals and unauthorized person out. Fences less than 8 feet high for potentially dangerous animals, such as but not limited to, large felines (e.g., lions, tigers, leopards, cougars, etc.), bears, wolves, rhinoceros, and elephants, or less than 6 feet high for other animals must be approved in writing by the Administrator. The fence must be constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from going through it or under it and having contact with the animals in the facility, and so that it can function as a secondary containment system for the animals in the facility. It must be of sufficient distance from the outside of the primary enclosure to prevent physical contact between animals inside the enclosure and animals or persons outside the perimeter fence. Such fences less than 3 feet in distance from the primary enclosure must be approved in writing by the Administrator. Correct by ensuring that all

Inspection Report

species requiring a perimeter fence are completely enclosed within an adequate perimeter fence that meets all requirements. Alternatively, an updated variance may be requested in writing and sent to the APHIS Administrator. Correct by 27-MAY-2026.

This inspection and exit interview were conducted with a Facility Representative.

The perimeter fence variance is currently under review.
