

## Inspection Report

---

Northeast Area Beltsville Location  
10300 Baltimore Ave, Building 003  
BELTSVILLE, MD 20705

Customer ID: **334304**

Certificate: **51-G-0001**

Site: 001

Northeast Area Beltsville Location

Type: ROUTINE INSPECTION

Date: 05-MAY-2026

---

### 2.32(a) Critical

#### Personnel qualifications.

The APHIS inspector reviewed an unexpected event report submitted on January 31, 2026 and an IACUC investigation report dated April 17, 2026, for RBC1 and E-line turkey poults on an IACUC-approved protocol. On January 29, turkey poults on an IACUC approved protocol in the main poultry building were receiving supplemental electrolytes. On January 30, research staff observed increased mortality, weak poults, and birds exhibiting abnormal clinical signs including increased vocalization, head tremors, convulsions, and dehydration. Research staff subsequently discovered crystallization on electrolyte waterers and confirmed that poults had received electrolyte solution in bell waterers and via oral syringe at 128 times the intended concentration because the stock solution had not been diluted prior to administration. Animal care personnel noted that the packaging for electrolytes differed from the standard packaging and that they had not received sufficient training to correctly dilute the product before administering it to the animals.

Excessive electrolyte administration led to severe clinical manifestations, resulting in 127 turkey poults becoming clinically ill and mortality for an additional 141 turkey poults.

Ensure all scientists, research technicians, animal technicians, and other personnel involved in animal care, treatment, and use are qualified for their duties, including receiving adequate oversight, standardized training, and clear procedures so that electrolyte solutions are prepared and administered correctly. Correct from May 7, 2026, forward.

### 3.150(d) Critical

#### Facilities, general.

The APHIS inspector reviewed an unexpected event report submitted on January 31, 2026 and an IACUC investigation report dated April 17, 2026, for RBC1 and E-line turkey poults on an IACUC-approved protocol. Heat lamps for two pens in the main poultry barn failed due to the heat lamps being connected to a single circuit that tripped the electrical breaker. The heat lamps were required to provide zones of additional heat to support the birds.

Although the barn temperature overall remained within normal ranges, the lack of adequate heat zones resulted in about 170 turkey poults to be cold, flipped over, and weak endangering the poults' health by causing cold stress.
