Hanna City, IL 61536

Customer ID: **2574**
Certificate: **33-C-0488**
Site: 001
Wildlife Prairie Park

Type: RE-LICENSE INSPECTION
Date: 19-MAY-2026

2.40(b)(3)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

There were three domestic pigeons (2-Blue bar, 1-Blue/White) that had overgrown upper beaks that protruded downward past the lower beak. The overgrown beaks had not been identified by facility representatives.

Overgrown beaks can impact a bird's ability to eat and drink appropriately, which can be detrimental to their health and well-being.

The male black bear (Samson, 4yr) was observed for approximately 20 minutes pacing in front of the fence that is located under a walking bridge that is directly across from the maintenance gate of the cougar enclosure. According to facility representatives, the cougar directly across from where the bear was pacing was vocalizing and was in heat, and could have been prompting the bear's sudden pacing. The cougar's fence and the bear's fence are approximately 30-40ft apart. There was an approximately 12ft- to 15ft-long pathway created by the male's pacing over time. The male did stop pacing as the inspection carried on up the hill. The male came to bathe and interact, then later went back down near the fence and started pacing again. The behavior had only previously been observed by the facility at feeding times.

Development of pacing in bears can be a sign of pain and/or distress.

The lack of daily observations of possible health issues or behavior changes in a timely manner can cause a minor treatable condition to become chronic or serious, causing unnecessary pain or discomfort the the regulated animal.

The licensee must ensure that daily observation of all animals occurs to assess their health and well-being; additionally, a mechanism of direct and frequent communication is required so that timely and accurate information on problems of animal health, behavior, and well-being is conveyed to the attending veterinarian.

3.130

Watering.

There is a cement bathing area (approx. 6ftx6ft x3ft) in the bear enclosure that has a buildup of dark green algae around the walls of the bath, and the water was brown in color. The bears have continual access to fresh, potable water to drink in the lockdown area of the enclosure.

Inspection Report

Unclean water receptacles can be a possible source of disease or other health issues if the animals drink and/or bathe in the water.

The cement bathing area must be cleaned and maintained to prevent the buildup of algae/dirt/debris. All water receptacles shall be kept clean and sanitary.

3.157(a)(2)

Water quality.

The pond (approx. 6ft x 4ft x 0.5ft) located in the bald eagle enclosure had a buildup of algae along the sides of the pond. There was a large accumulation of plant material in the upper pond section. Facility representatives said the pond pump was not working and had not been replaced yet. The facility's staff had not undertaken regular maintenance of the pond for approximately 2 to 3 months, allowing time for the buildup of algae growth in the water, according to facility representatives.

The lack of proper cleaning and maintenance of a pond that birds have access to for bathing or feeding can be a possible source of health issues due to algae and/or bacterial growth.

Pools or other aquatic areas with drainage systems must provide adequate drainage and must be located so that all of the water contained in such pools or other aquatic areas may be effectively eliminated when necessary for cleaning the pool or other aquatic area or for other purposes.

This was a 1st Re-License Inspection for a Class C license. The inspection and exit briefing were conducted with the applicant.

All items must be in compliance within 2 more inspections or by July 18, 2026 or the applicant will forfeit the license fee and must wait 6 months to reapply. Please contact your inspector to schedule your next Re-License Inspection.

Regulated activity can continue under your existing USDA license until it expires.
