Records: Dealers and exhibitors.

The acquisition and disposition records available for review were again not current or complete. The acquisition of animals obtained (cows, peacocks, pigs) and those disposed of (peacocks, cows, zebu, a rhea, and a budgie) are either missing all or part of the following: dates of acquisition or disposition, names and addresses of whom the animals were acquired from or transferred to, their USDA license number and/or Driver's license number with state of issuance. Other animals (goats, cows, a nilgai, and zebu) were born on property but not properly documented with full dates of birth. Without records which fully disclose the animal's acquisition as well as disposition information, legal and medical information traceback is not possible. The facility shall ensure that it makes, keeps, and maintains records which fully and correctly disclose the following information concerning all exhibition animals: the date of the acquisition or disposition, the species and quantity of animals involved, the name, address, and USDA number, if applicable, of the person from whom the animal was acquired from or given to, or the vehicle license number and state, as well as the driver's license number and state of the person, if not licensed or registered with the Animal Welfare Act. The records shall include any offspring born of any animal while in his or her possession or under his or her control.

2.131(d)(2)

Handling of animals.

A readily identifiable employee was not present at all times during periods of contact with members of the public. A family of two adults and one child were observed feeding and touching llamas and emus at the petting zoo area without an attendant present. Lack of employee oversight of direct interactions between the animals and the visitors may lead to injury to the public and/or injury or distress to the animals. A responsible, knowledgeable, and readily identifiable employee or attendant must be present at all times during periods of public contact.

Environment enhancement to promote psychological well-being.

At the time of inspection, the facility did not provide an adequately detailed species-specific environmental enhancement plan for all the birds on hand. The facility still has ostriches, emus, and peacocks that were not included in the provided enrichment plan. A written plan addressing the specific needs of the varied species is necessary to ensure that the overall health, well-being, and psychological needs of the birds are being appropriately met. The facility must develop, document,

and follow a species-appropriate plan for environment enhancement adequate to promote the psychological well-being of the birds. The plan must be approved by the attending veterinarian and must address social grouping, environmental enrichment, special considerations, restraint devices, and exemptions.

3.158(a)(1)

Cleaning, sanitization, housekeeping, and pest control.

The parakeet primary enclosure aviary needed cleaning to remove excess accumulations of excreta. Excreta and food waste had accumulated along the horizontal wood beams that provided part of the frame of the wire enclosure, closest to the barn walkway. Also, a free standing wire cage, left open for free access for all the birds as an enrichment item, was present with excrement covering most surfaces, including not only the wire of the enclosure, but also all perches and hanging toys hanging within. Regular cleaning is necessary to prevent soiling of the birds and to reduce disease hazards, insects, pests, and odors. Excreta, debris, and food waste shall be removed from primary enclosures and from under and around primary enclosures as often as necessary to prevent excessive accumulations.

This inspection and exit interview were conducted with the licensee.
