Watering.

Potable water was not provided as often as necessary for the health and comfort of two (2) Three-Banded Armadillos. The only water receptacle for both animals was turned over onto its side and empty. APHIS Officials requested that water be provided to the animals. The facility representative refilled the water receptacle; when the refilled water receptacle was placed in the enclosure, both armadillos moved quickly towards the receptacle. One animal pushed the other out of the way to begin drinking. One animal drank vigorously for approximately five (5) minutes. The facility representative stated that the water had been refilled that morning, and that a secondary water receptacle had been attached to the outside of the primary enclosure. The facility representative was unable to find the secondary water receptacle. Failure to provide sufficient quantities of potable water can result in dehydration, illness or death to the animals. The facility must provide sufficient water as necessary for the health and comfort of the animals.

A complete routine inspection was conducted starting on September 1, 2026. This inspection report is limited to the Direct non-compliances identified during that inspection. An additional inspection report will be delivered with the other issues identified during this inspection.

This inspection and exit interview were conducted with the authorized person.
