Type: FOCUSED INSPECTION

Date: 06-MAR-2026

2.131(c)(1)

Handling of animals.

On February 8, 2026, a child was bitten on the leg by a 4yr old male camel. The bite did not break the skin but did leave a red mark. The camel had been placed in a temporary enclosure while the facility was doing work on another enclosure. This temporary enclosure was made of wire fencing material on all four sides. The side of the fence that was accessible to the public measured 44.5 inches in height, while the camel was approximately 6ft tall. There was no public barrier or attendant present. The height difference between the camel and the fence allowed the camel to lean over and bite the child on the leg while posing for a picture.

A lack of sufficient distance and/or barriers between the public and animals can lead to animal stress and/or injury as well as injury to the public.

During public exhibition, any animal must be handled so there is minimal risk of harm to the animal and to the public, with sufficient distance and/or barriers between the animal and the general viewing public so as to assure the safety of animals and the public.

Corrected prior to the inspection.

This inspection and exit interview were conducted with a facility representative.
