Museum

Type: ROUTINE INSPECTION

Date: 16-APR-2026

2.134(b)

Repeat

Contingency planning.

The facility has a documented contingency plan, however an annual review still has not been conducted since May of 2024. An annual review of the contingency plan helps ensure that any needed changes are made and communicated to all personnel that have a role or responsibilities in the plan to provide for the humane handling, treatment, transportation, housing and care of the animals in the event of an emergency or disaster. The facility must ensure that the contingency plan is reviewed on at least an annual basis and must also maintain documentation of those reviews. The facility must correct this issue.

3.125(a)

Facilities, general.

Multiple ends of jagged wire was observed protruding into the skunk enclosure. This was observed along the bottom portion where the chain link wire meets the wooden side panels. This issue could potentially cause injury to the animal. Animal enclosures must be kept in good repair in order to secure the animals and minimize any potential risk of injury. The facility must correct this issue.

*****Correct by 4/22/26

3.150(e)

Repeat

Facilities, general.

The facility is still storing leftover food items in the freezer which is used to store bird food items. This material is collected from the bird enclosures as part of the process in order to monitor consumption. This consists leftover food items, feathers and waste debris. Animal waste and food residue can potentially lead to contamination of the animals diet, and these items not intended for food must not be kept in food storage areas or food freezers. The facility must correct this issue.

This inspection and exit interview were conducted with the facility representative.
