Type: ROUTINE INSPECTION
Date: 01-JUN-2026

3.150(a)

Facilities, general.

The enclosure for two white geese had an electrical plug with an approximately eight-inch extension that had frayed and exposed non-insulated electrical wires. The damaged wiring was located approximately one foot above the ground. Possible contact with exposed electrical wiring could cause injury to the animals.

Housing facilities for birds must be designed and constructed so that they are structurally sound for the species of bird housed in them. They must be kept in good repair, protect the birds from injury, and restrict other animals from entering that may negatively affect the welfare of the birds within.

Corrected at time of inspection.

2.40(b)(3) **Direct** **Repeat**

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

The facility had not observed that a six -year -old male pot -bellied pig named "Pig Pig" had an overgrown left tusk that had penetrated the skin of the facial area below the eye. A yellow creamy substance was draining from the facial wound. The tips of both ears had an approximately four-inch-long lesion that was open, red, hairless, and swollen. The attending veterinarian was not contacted about health issues. Open wounds if left untreated may lead to more serious infections and serious health issues.

Each dealer or exhibitor shall establish and maintain programs of adequate veterinary care that include: Daily observation of all animals to assess their health and well-being; Provided, however, That daily observation of animals may be accomplished by someone other than the attending veterinarian; and Provided, further, That a mechanism of direct and frequent communication is required so that timely and accurate information on problems of animal health, behavior, and well-being is conveyed to the attending veterinarian.

The facility contacted the attending veterinarian and provided immediate treatment for the conditions.

3.6(b)(4) **Repeat**

Inspection Report

Primary enclosures.

In an indoor building, a primary enclosure is currently housing five weaned cats. The enclosure does not contain an elevated resting surface. All cat enclosures must have elevated resting surfaces large enough to safely contain all animals in the enclosure. The facility must provide adequate resting surfaces for all cats.

Corrected at time of inspection.

This inspection and exit interview were conducted with a facility representative.
