Type: FOCUSED INSPECTION
Date: 26-MAR-2026

2.36(b)(3)

Annual report.

The FY 25 Annual Report submitted to USDA was reviewed. There were no exceptions to the provisions of the AWA reported on the USDA Annual Report for FY 25; however, IACUC approved protocol 23-08-0005 includes an exception to the provisions of the AWA under Subpart F Feeding for swine.

Per this Section, the annual report shall assure that the research facility is adhering to the standards and regulations under the Act, and that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the IACUC. A summary of all such IACUC-approved exceptions must be attached to the facility's annual report that includes a brief explanation of the exceptions, as well as the species and number of animals affected. In addition, any departures from the provisions of title 9, chapter I, subchapter A – Animal Welfare must be specifically identified, along with the reasons for each departure, on the semi-annual reports sent by the IACUC to the Institutional Official.

Correct by (1) submitting a corrected FY 25 Annual Report to USDA by 5/1/26 that includes a summary of the exception with number of animals affected and (2) including any IACUC approved departures on future USDA annual reports from this date 3/26/26 forward.

2.38(f)(1)

Miscellaneous.

Four non-human primates (NHPs) were not handled as carefully as possible by veterinary technical staff. On 10/6/25, four NHPs scheduled for routine semi-annual TB testing were mistakenly administered a tetanus vaccine instead of tuberculin. The error occurred when veterinary technical staff preparing for the procedure selected the wrong bottle and did not verify the label before withdrawing the doses. The veterinary technicians reported the error to the veterinarian who immediately examined the NHPs and determined that the amount administered was small and consistent with a therapeutic dosing of tetanus vaccine. No adverse effects from the vaccine were observed in the NHPs.

Per this Section, the handling of animals by all personnel should be done as carefully as possible in a manner that does not cause physical harm or unnecessary discomfort. The four NHPs were not handled as carefully as possible during the preventative medical procedure when veterinary technical staff failed to verify the medication vial label when withdrawing

Inspection Report

the doses of medication and subsequently administered the incorrect product to the NHPs. Corrective measures were implemented prior to this inspection, which included retraining all personnel involved in TB testing on all procedures to be followed during testing, and the TB testing form was updated to include notation of the tuberculin lot number and to include verification initials when doses are withdrawn. No additional incidents have occurred. To remain corrected from this date 3/26/26.

This inspection and exit briefing were conducted with facility representatives.
