Type: FOCUSED INSPECTION

Date: 06-APR-2026

2.131(b)(1) Critical

Handling of animals.

On 20 March 2026, while performing training flights for the exhibition bird show, the female Roseate Spoonbill diverted from her planned flight pattern, landed in the Cheetah enclosure, and was injured prior to being recovered. The Facility immediately responded by activating their recapture team and she was recovered uneventfully. The Attending Veterinarian was onsite at the Cheetah enclosure and identified a cut on the bird's wing. The spoonbill was then transported to the Veterinary hospital where the wound was closed surgically. Handling of all animals shall be done as expeditiously and carefully as possible in a manner that does not cause trauma, overheating, excessive cooling, behavioral stress, physical harm, or unnecessary discomfort.

Correct by: 16 April 2026

This inspection and exit interview were conducted with Facility Representative.
