Type: ROUTINE INSPECTION

Date: 18-JUN-2026

2.40(b)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

A bottle of pyrantel expired on 6/26/25. The licensee stated he has probably used it recently. Expired medications/products doesn't ensure that the product given to the animal is safe and of a high quality. The expired medication/product could be ineffective or toxic to the animal(s). Expired medications and products must not be used on regulated animals and need to be removed from the storage area that is reserved for use in regulated animals. Correct starting on 6/18/26.

2.78(a)(1)

Health certification and identification.

Two litters of puppies (one litter had 6 puppies and the other litter had 3 puppies) did not have health certificates completed by a licensed veterinarian prior to being shipped. Shipping dogs without having a completed health certificate doesn't ensure the dogs being shipped are in good health. All dogs being shipped must have a health certificate completed by a licensed veterinarian no more than 10 days prior to the delivery of the dogs. Correct starting on 6/18/26.

2.130

Minimum age requirements.

Six puppies born on 2/20/26 were sold and transported on 4/16/26. The puppies would have been 55 days old on the day of sale which is one day shy of the required 8 weeks of age that they are required to be before being sold and transported. Dogs younger than 8 weeks of age are more susceptible to stresses that occur from travelling and being placed into a new facility. Their immune systems are more susceptible to becoming comprised which could cause them to become sick and even die. The licensee must not sell any puppies under 8 weeks of age unless it is directly to the end consumer. Correct starting on 6/18/26.

3.1(a)

Housing facilities, general.

Two areas of the kennel were in disrepair. One enclosure had a hole in the see through doggy door with jagged (unsmooth edges). Another enclosure had the wire front of the enclosure loose and coming out (bowing) into the walkway as the dogs jumped on it.

Inspection Report

A hole in an enclosure door with jagged edges could cause injury to the dogs in that enclosure. It could also allow pests such as flies to enter the building. The wire front of the other enclosure coming loose and bowing outward as the dogs jump on it could result in a dog getting stuck or injured when the wire front bows outward and creates an opening into the walkway. It could also result in the dog escaping the enclosure.

Housing facilities for all dogs must be designed and constructed so they are structurally sound. They must be kept in good repair and must protect the dogs from injury and contain the animals securely.

Correct by 7/18/26.

3.6(a)(2)(ix)

Primary enclosures.

Multiple outdoor enclosures had rust on the fencing and posts. Rust does not allow for the enclosure to be readily cleaned and sanitized. All enclosures must be constructed and maintained so they are free of rust and can be readily cleaned and sanitized. Correct by 7/18/26.

3.11(b)(2)

Cleaning, sanitization, housekeeping, and pest control.

The enclosures appeared to be dirty during inspection. Fecal matter/dirt was smeared on the walls of the enclosures, around the frames of the openings (that lead to the outdoor part of the enclosure), on the doggy doors, and on the black mats that the dogs lay/sit on. The licensee stated that he sanitizes about once a month and last sanitized the enclosures about 2-3 weeks ago. Not sanitizing the enclosures on a biweekly basis (or more often if necessary) allows for fecal material and grime to build up which can contribute to the spread of disease. The licensee must sanitize the enclosures every two weeks or more often as necessary to prevent the accumulation of dirt, debris, excreta, and other disease hazards. Correct by 7/2/26.

3.11(c)

Repeat

Cleaning, sanitization, housekeeping, and pest control.

The exercise area that adult dogs use has overgrown weeds and grass. Overgrown weeds and grass make the area difficult to observe dogs in it (to be sure they are secure), is difficult to clean, and can create areas for rodents and pests to live in. Ensure that vegetation in the exercise area is controlled in a manner that allows cleaning of the area and to protect the health and well-being of the dogs that use that area.

This inspection and exit interview were conducted with the licensee.

End of report.
