Critical

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

A 5 year old male neutered red kangaroo, Pickles, was brought into the emergency hospital on September 30, 2025 for swelling in his jaw, which was noticed about 3-4 days prior. His appetite decreased about 10 days before bringing him into the veterinarian. Pickles went home without medication, because it was stated that the facility had Meloxicam on hand. Pickles went back to the veterinarian on October 1, 2025 for radiographs and Metronidazole was prescribed. On November 3, 2025, Pickles came back in for a recheck and he was doing much better. On November 10, 2025, the facility contacted the veterinarian because Pickles' mouth was swollen again with a "foul smell". The Veterinarian advised that they continue to flush the mouth daily and give Metronidazole. Medication was declined because staff stated that they already had Metronidazole on site. Roughly an hour after they spoke with the vet about a "foul smell" and swelling, Pickles had "pus discharged from his nose and mouth". The in-house medical paperwork further states he wasn't eating. The licensee didn't follow back up with the veterinarian after the new symptoms. No documentation or notes were written again until November 21, 2025, when Pickles' face swelled again. He was brought back to the veterinarian on November 21, 2025 and on arrival, Pickles was weak and his heart began to slow down. The handler asked for approval from the licensee to start CPR, but it was declined. Humane euthanasia was recommended and the licensee approved. Failure to provide adequate veterinary care and treat conditions in a timely manner can cause unnecessary distress, pain, and negatively affect the animal's health and well-being. The licensee must have these animals evaluated by a veterinarian to properly diagnose the medical conditions and develop an appropriate plan for treatment. The licensee must ensure that all animals receive adequate veterinary care at all times by providing the use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries.

CORRECTION DATE: 22 JANUARY 2026

3.154

Environment enhancement to promote psychological well-being.

The birds at the facility did not have an environmental enhancement plan that has been approved by the attending veterinarian. Failure to maintain and follow an approved written plan can be detrimental to the psychological health and well-being of the animals. The environment enhancement plan must be in place to promote the psychological well-being of the birds. The licensee must provide and follow an enrichment plan that has been approved by their attending veterinarian.
