Type: ROUTINE INSPECTION

Date: 25-MAR-2026

2.40(b)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

The licensee did not have a written, documented program of veterinary care established and maintained under the supervision of an attending veterinarian for the animals housed at this facility for the past year. During the inspection, the licensee could not produce any program of veterinary care, written documentation of veterinary oversight or records showing that a veterinarian has been contacted or designated to provide services for these animals. Failure to establish and maintain a program of veterinary care places the animals at risk of undetected illness, injury, and inadequate medical treatment. Without veterinary involvement the health and welfare of the animals cannot be assured. The licensee must establish a written program of veterinary care that includes the designation of an attending veterinarian who is readily available to provide adequate veterinary care. The program must include regularly scheduled visits, provisions for emergency care, preventative medical practices, and documentation of treatments provided.

CORRECTION DATE: 17 APR 2026

2.40(b)(2)

Critical

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

There was a flea infestation that occurred at the facility during February 2026. One female pig tailed monkey, 25 year old, named "Yaya" was affected by the fleas. She received antiparasitic treatment without direction from the attending veterinarian and ended up passing. Other animals (goats, lemurs, chickens, serval, baboons, kangaroos, goose, llama, and alpaca) affected by the fleas, were also treated with antiparasitic treatment without direction of the attending veterinarian and the issue resolved following treatment. Without veterinarian oversight, the diagnosis as well as the methods used to care for the animals could be inadequate or inappropriate for the animal. The licensee, in conjunction with a veterinarian, must use appropriate methods to prevent, control, diagnose, and treat diseases and injuries, and must determine the availability of emergency, weekend, and holiday care.

Inspection Report

It was reported to the Webb County Sheriffs Office of a lemur bite on January 21, 2026. This incident occurred when the individual went to the lemur island at the facility and the was bitten by a lemur while feeding it. Allowing public interactions with nonhuman primates without direct control can lead to harm to the animals or the public. Trained nonhuman primates may be allowed physical contact with the public, but only if they are under the direct control and supervision of an experienced handler or trainer at all times during the contact.

CORRECTION DATE: 08 APR 2026

3.127(b) **Critical**

Facilities, outdoor.

At the petting zoo area, a capybara in an outdoor enclosure died due to cold weather in January 2026. Inadequate provisions from local climatic conditions could subject the species to unfavorable weather, affecting the health of the animals and creating unnecessary discomfort or could lead to death. Natural or artificial shelter appropriate to the local climatic conditions for the species concerned shall be provided for all animals kept outdoors to afford them protection and to prevent discomfort to such animals.

CORRECTION DATE: 10 APRIL 2026

This inspection and exit interview were conducted with facility representatives.
