Type: ROUTINE INSPECTION
Date: 18-FEB-2026

2.131(e) Critical

Handling of animals.

During the winter months, the Zebra are pulled off exhibit and housed in stalls in a large barn that is not temperature regulated. On January 6, 2026, the new AV arrived for an interview to find an approximate one month old zebra foal down in an office area and according to the vet, was "ice cold" with "no readable temperature". There was no way to adequately warm the foal and it died that night of septicemia. According to the vet, the cold temperatures impaired the foals ability to recover. The daily average temperatures according to "Accu Weather" the week prior to the death were low 20's F during the day and in the teens during the overnight hours. Temperatures for zebra's in the winter need to be sufficiently regulated to protect the animals, especially young animals from extreme temperatures that would cause harm or discomfort.

Correct by: Feb 28, 2026

This inspection and exit interview were conducted with a facility representative.
