Type: ROUTINE INSPECTION
Date: 02-SEP-2026

2.31(e)(3)

Institutional Animal Care and Use Committee (IACUC).

The principal investigator did not conduct sedation and monitoring procedures in accordance with the IACUC approved protocol (PROTO202300033). The PI used assumed body weights, underdosed atropine, prepared reversal agents using an undocumented dilution method, and did not document protocol required anesthetic monitoring and recovery parameters. These deviations occurred across a cohort of infant rhesus macaques born in May–June 2025 and continued as these same animals reached one year of age, demonstrating repeated departures from the protocol's described weight based dosing and required monitoring over time.

Because the protocol must provide "a complete description of the proposed use of the animals" and requires activities to match that description, these departures represent protocol adherence failures. Such deviations are important because they reduce the IACUC's ability to ensure that procedures limit discomfort and safeguard welfare. In this case, deviations in dosing and monitoring could compromise physiologic stability during sedation, and incomplete monitoring may fail to detect signs of distress or adverse reactions. Protocols must contain a complete description of the proposed use of the animals, and activities must be conducted in accordance with that description.

3.83

Watering.

The facility failed to provide potable water to a rhesus macaque (animal #685) for two consecutive days (February 7–8, 2026) following a cage reconfiguration, as evident during the record review portion of the inspection. The animal did not receive continuous water nor twice daily watering. Because water deprivation directly affects hydration, organ function, and stress physiology, a two day lapse can negatively affect the health and well being of the animal. Potable water must be provided in sufficient quantity to every nonhuman primate, and when continuous access is not provided, water must be offered at least twice daily to ensure health and well being.

Inspection Report

This inspection and exit interview were conducted with facility representatives.

You may appeal all or part of any inspection report by submitting a written statement contesting the findings—along with any supporting documentation—to the Deputy Administrator. Appeals of routine, focused, or attempted inspections must be received within 21 days of report issuance as shown by the signature line of this report.

Appeals may be sent by email to AnimalCare@usda.gov.

Appeals sent by mail should be addressed to:
Deputy Administrator
APHIS Animal Care (AC)
U.S. Department of Agriculture
