

Inspection Report

Daniel Hall
3632 County Road 92
Graham, AL 36263

Customer ID: **6026051**
Certificate: **64-C-0266**
Site: 001
Daniel Hall

Type: ROUTINE INSPECTION
Date: 13-AUG-2026

3.150(a)

Facilities, general.

The welded wire fencing containing the five emus is hanging loosely and bowed inward indicating a loss of tension. Several fence posts are leaning significantly rather than standing upright. The horizontal wires show uneven spacing and a wavy, distorted appearance. Fencing that is damaged or in disrepair can injure birds or allow them to escape. Housing facilities for birds must be kept in good repair and protect the birds from injury. To be corrected by September 11, 2026.

3.125(a)

Facilities, general.

Multiple primary enclosures require maintenance and repair:

- In the enclosure housing two dromedary camels the top horizontal gate fence rail is bent downward at the center creating a noticeable dip. The connection where the diagonal support bar meets the top rail is broken and separated leaving the brace loose and exposing a sharp edge. The gate frame also appears warped and due to the bent top rail it no longer maintains its proper rectangular shape.
- The welded wire fencing containing the zebra is hanging loosely and bowed inward indicating a loss of tension. Several fence posts are leaning significantly rather than standing upright. The horizontal wires show uneven spacing and a wavy, distorted appearance. According to the caretaker the zebra frequently reaches over and pulls the fence down in an attempt to access grass on the opposite side.

Fencing that is damaged or in disrepair can injure livestock or allow them to escape. Housing facilities shall be maintained in good repair to protect the animals from injury and contain the animals. To be corrected by September 11, 2026.

This inspection and exit interview were conducted with facility representatives.
