Type: ROUTINE INSPECTION

Date: 19-AUG-2026

3.127(d)

Facilities, outdoor.

The perimeter fence surrounding the primary enclosures of a African Porcupine failed to maintain the 3-foot minimum distance required under 3.127(d). The northern section of the perimeter fence in the rear of the enclosure is roughly shorter than 4 feet and is also the primary enclosure fencing. There was no written approval for this variance from the 3-foot minimum distance requirement.

The perimeter fence must be constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from going through it or under it and having contact with the animals in the facility, and so that it can function as a secondary containment system for the animals in the facility. It must be of sufficient distance from the outside of the primary enclosure to prevent physical contact between animals inside the enclosure and animals or persons outside the perimeter fence. Such fences less than 3 feet in distance from the primary enclosure must be approved in writing by the Administrator.

The facility must ensure the primary enclosure is 3-feet from the perimeter and the facility must ensure the perimeter fence is 6-feet in height.

Correct by Sept 30 2026

This inspection and exit interview were conducted with a facility representative.
