Type: ROUTINE INSPECTION
Date: 09-JUL-2026

3.13(a)(3)

Veterinary care for dogs.

The facility is not following the program of veterinary care for vaccinations. The Program of Veterinary Care currently prescribes dogs will be vaccinated for Distemper/Hepatitis/Parvovirus/Leptospirosis vaccines at 9 weeks of age, 12 weeks of age, 15 weeks of age, and annually going forward. The available medical record for a 14-week-old female Standard Poodle puppy named Charlotte (microchip # 6016) born on 30-March-2026, does not show a vaccine containing leptospirosis has been administered. The last vaccine administered per available medical records was a 5-way vaccine given at 6 weeks of age on 14-May-2026.

Failure to follow the preventative care schedule for vaccinations in the Program of Veterinary Care does not ensure the dogs are receiving appropriate protection against contagious and deadly diseases such as distemper, parvo, leptospirosis, and rabies which can lead to illness and discomfort to the dogs. The facility must follow the vaccination schedule approved by the attending veterinarian in the Program of Veterinary Care to protect the dogs from deadly or contagious diseases.

Correct by 16-July-2026.

This inspection and exit interview were conducted with the facility representative.
