Certificate: **85-C-0015**

Site: 001

NEW MEXICO WILDLIFE ASSOC.

Type: RE-LICENSE INSPECTION

Date: 22-JUL-2026

2.40(b)(3)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

There is one ~6 year old female pronghorn named "Thunder" and one ~16 year old female mule deer named "Velcro" with very overgrown front hooves. Although neither animal is overtly lame upon observation, the overgrowth is forcing the heels downward when the animals bear weight on the affected limbs. The facility representative told the inspector they had not realized how long the hooves had become and that they usually just wait for the hooves to break off on their own. When this was discussed during the inspection, the representative sent a text message to the attending veterinarian to request guidance and make a plan for managing the hooves on these two animals.

When hooves become so long that they alter the natural angles of the feet and lower legs, this causes strain and weakening of soft tissue support structures. Failure to communicate the problem to the attending veterinarian delays intervention and increases the likelihood that pain, lameness and permanent damage will occur. The licensee must ensure that adequate daily observation of all animals is done to assess their health and well-being, and that there is a mechanism of direct and frequent communication so that timely and accurate information on problems of animal health, behavior and well being is conveyed to the attending veterinarian.

CORRECT BY DEVELOPING A PLAN WITH THE ATTENDING VETERINARIAN FOR MANAGEMENT OF THE OVERGROWN HOOVES BY 07/27/2026

3.125(a)

Facilities, general.

The enclosure housing an adult female elk named "Chama" has a section of fence that is in disrepair, patched with broken and stretched chicken wire and partially covered with small, unattached, weathered boards that are easily pushed aside. The hole measures ~1 foot by 2 foot. The facility representative had a worker repair the fence when discovered during the inspection.

Damaged fences can permit entry of predators and are an entrapment and injury hazard for the animals inside the enclosure. The facility must be constructed of such material and of such strength as appropriate for the animals involved. The indoor and outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury and to contain the animals.

CORRECTED AT THE TIME OF INSPECTION

Inspection Report

This is a 1st Re-License Inspection for a Class "C" license. The inspection and exit briefing were conducted with the applicant.

All items must be in compliance within 2 more inspections or by 09/21/2026 or the applicant will forfeit the license fee and must wait 6 months to reapply. Please contact your inspector to schedule your next Re-License Inspection.

Regulated activity can continue under your existing USDA license until it expires.
