Type: ROUTINE INSPECTION

Date: 22-JUL-2026

2.31(c)(7)

Institutional Animal Care and Use Committee (IACUC).

A review of records for protocol 111620-1-2023 revealed a significant deviation from the approved IACUC study protocol. On May 13, 2026, a pig was given four injections of preanesthetic medication in order to achieve appropriate sedation. The total amount of medication given exceeded the range detailed in the protocol. The study protocol states xylazine should be given at 0.5-1 mg/kg and ketamine at 1-2 mg/kg, and the pig received 2.3 mg/kg of xylazine and 4.5 mg/kg of ketamine.

This activity constitutes a significant deviation from the approved activities in the protocol. Making significant changes to protocols without IACUC review and approval deprives the IACUC of the opportunity to provide oversight of animal activities and compliance with the Animal Welfare Act. Failing to complete assessments as described in the IACUC protocol could result in unrecognized suffering in the affected animals.

Principal investigators are to follow the IACUC approved protocols, and any proposed changes shall be reviewed and approved by the IACUC prior to implementation. Those carrying out procedures in an IACUC-approved protocol must adhere to what was approved by the IACUC.

Correct by August 6, 2026

This inspection and exit interview were conducted with facility representatives.
