Bird Island

Type: ROUTINE INSPECTION

Date: 23-JUL-2026

3.131(a)

Sanitation.

Several enclosures housing pigs contain an excessive amount of feces along the floor slats of the enclosures. Some pigs have feces on their legs and backs. Feces have accumulated in front of and on the feeders. The licensee states that the pens are cleaned and sanitized before animals are placed in the pen and after they are transferred out, but it may be several weeks before the pigs are transferred out and the pens are cleaned.

The excess accumulation of excreta may lead to contamination of the animals, spread of disease, odors, or attract pests.

Excreta shall be removed from primary enclosures as often as necessary to prevent contamination of the animals contained therein and to minimize disease hazards and to reduce odors. When enclosures are cleaned by hosing or flushing, adequate measures shall be taken to protect the animals confined in such enclosures from being directly sprayed with the stream of water or wetted involuntarily.

Correct by August 12, 2026.

This inspection and exit interview were conducted with facility representatives.
