Type: ROUTINE INSPECTION
Date: 19-AUG-2026

3.127(d)

Facilities, outdoor.

The perimeter fence surrounding the primary enclosures of nine Capybaras and two Patagonian Cavys failed to maintain the 6-foot minimum height required under 3.127(d). A section of the perimeter fence situated behind the section of the enclosure near the highway has been warped and flattened by falling tree branches. There was no written approval for a variance from the 6-foot minimum height requirement.

The perimeter fence must be constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from going through it or under it and having contact with the animals in the facility, and so that it can function as a secondary containment system for the animals in the facility. It must be of sufficient distance from the outside of the primary enclosure to prevent physical contact between animals inside the enclosure and animals or persons outside the perimeter fence. Such fences less than 3 feet in distance from the primary enclosure must be approved in writing by the Administrator.

The facility must ensure the primary enclosure is 3-feet from the perimeter, and the facility must ensure the perimeter fence is 6-feet in height.

Correct by September 30, 2026.

This inspection and exit interview were conducted with the licensee.
