Certificate: **85-C-0006**
Site: 001
CITY OF CLOVIS

Type: ROUTINE INSPECTION
Date: 09-JUL-2026

2.40(b)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

There is one expired container of silver sulfadiazine cream (expiration date of 02/2026) on a shelf in the pharmacy area. The facility representative disposed of the container when found during inspection.

The use of expired medications is not considered to be a safe or appropriate method to prevent, control, diagnose, and treat diseases and injuries because expired drugs may be ineffective or produce other undesired effects. Animals may experience discomfort or distress due to unrelieved symptoms or unexpected side effects from the use of expired medication. The program for providing adequate veterinary care shall include the use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries. This includes establishing and following procedures to ensure that medications are removed when expired and cannot be administered to animals.

CORRECTED DURING THE TIME OF THIS INSPECTION ON 07/09/2026

3.154(b)

Environment enhancement to promote psychological well-being.

Two adult female ostriches and one adult male ostrich exhibit varying degrees of baldness on the hindquarters, and the inspector and facility representative witnessed a very brief interaction where all three birds were each pecking on the hindquarters of a different ostrich. Although the witnessed pecking was not prolonged or vicious and the plucked skin of the birds did not appear red or irritated in appearance, the area of missing feathers was as much as ~50% of the hips and rear, lower abdomen on the females; the remaining feathers appeared greasy or clumped and unkempt. When asked about this, the facility representative stated that the attending veterinarian visited about 2 weeks prior and was looking into the matter, but no one had seen any of the feather picking between the birds until the day of the inspection. The avian environment enhancement plan lists species-specific daily enrichments for the other bird species at the zoo, but does not specify enrichment for the ostriches. Keeper records show limited species-specific enrichment performed and the most frequent enrichment offered was water hosing from the keeper and a mud wallow.

Ostriches are desert or semi-desert species that do not normally wallow in mud, but do dust-bathe to absorb excess oil from their feathers and aid in temperature regulation and parasite removal. Failure to provide adequate and appropriate enrichment to birds that encourages non-injurious, natural behaviors can cause boredom and distress or even illness and incompatibility. The facility must ensure that the physical environment in the primary enclosures is enriched by materials or activities that would provide the birds with the means to express non-injurious, species-typical activities. Species differences should be considered when determining the type or methods of enrichment and be approved by the Attending
