Type: ROUTINE INSPECTION
Date: 04-JUN-2026

3.6(a)(2)(ix)

Primary enclosures.

In 3 of the enclosures containing dogs there are sections of the floor and lower part of the walls that are damaged with exposed base material which cannot be adequately cleaned or sanitized. Rough, uneven surfaces cannot be readily cleaned and sanitized and may therefore harbor pathogens that can cause disease in these animals. The facility must ensure that all surfaces in contact with the dogs can be cleaned and sanitized or be replaceable when worn or soiled.
Corrected by: June 12th 2026

3.13(a)(3)

Repeat

Veterinary care for dogs.

No dogs at the kennel have received heartworm prevention since June 2025. The program of veterinary care states that heartworm prevention should be given monthly and year round.
Failure to provide heartworm prevention in accordance to the program of veterinary care greatly increases the risk that dogs will contract heartworm disease.
Vaccinations for contagious and/or deadly diseases of dogs (including rabies, parvovirus and distemper) and sampling and treatment of parasites and other pests (including fleas, worms, coccidia, giardia, and heartworm) in accordance with a schedule approved by the attending veterinarian.
Correct by: June 4th 2026

This inspection and exit interview were conducted with Facility Representative.
