Type: ROUTINE INSPECTION

Date: 19-AUG-2026

2.38(f)(1)

Miscellaneous.

On September 19, 2025, research staff attempted to place an adult cynomolgus macaque into a restraint chair for a study procedure under an approved protocol when the animal became stressed and tried to jump back into its enclosure. The animal struck its head on the exterior aspect of the enclosure while attempting to jump back in and sustained a laceration under its eye due to a sharp edge where the water bottle is attached. Veterinary care was provided immediately and the animal fully recovered after treatment. The facility has updated their guidelines to include reacclimating nonhuman primates to the restraint chair if they have had greater than 6 months since a previous chair study and to ensure enclosure racks are checked for sharp edges that may pose a risk of injury to personnel and animals.

Failure to handle animals in an appropriate and careful manner may result in unexpected pain and distress to the animals. Handling of all animals shall be done as expeditiously and carefully as possible in a manner that does not cause trauma, overheating, excessive cooling, behavioral stress, physical harm, or unnecessary discomfort.

Corrected prior to inspection.

This inspection and exit interview were conducted with facility representatives.
