Type: ROUTINE INSPECTION

Date: 03-MAR-2026

3.153(a)(1)(iii) Critical

Primary enclosures.

On October 17, 2025, six chicken hens escaped their primary enclosures in the main poultry barn after pushing or pecking at a door spring, creating an opening large enough to escape. Four hens sustained severe wing trauma from contact with the caging and required humane euthanasia, and two hens with superficial bruising and cuts from the caging received veterinary care and recovered. On November 20, 2025, eight turkey hens escaped their primary enclosures in the same barn after manipulating the cage door latch and creating an opening large enough to push through. Four hens with superficial bruising and cuts from the caging received veterinary care and fully recovered.

Primary enclosures that do not securely contain birds allow animals to escape and expose them to injury, stress, or death. The failure of these enclosures directly resulted in serious injuries to multiple birds and the euthanasia of four hens.

Ensure all poultry primary enclosures are maintained in good repair and constructed to securely contain birds at all times to prevent recurrence. Enclosures were repaired and reinforced. Corrected prior to inspection.

This inspection and exit interview were conducted with Facility Representatives.

End of report.
