Mowrey

Type: ROUTINE INSPECTION

Date: 11-MAR-2026

3.125(a)

Facilities, general.

The enclosure housing a kinkajou has a wire mesh approximately .5 X .5 inches in size surrounding a wooden frame. On the front panel of the enclosure, the mesh contains a hole measuring approximately 2.5 X 4 inches. The broken wire surrounding the hole has created multiple sharp edges that protrude inward into the enclosure.

Sharp edges may pose a risk of injury to the animal through cuts, abrasions, or entanglement if the animal comes into contact with the damaged mesh.

Housing facilities shall be maintained in good repair to protect the animals from injury and to contain the animals. Corrected at the time of inspection, March 11, 2026.

This inspection and exit interview were conducted with a facility representative.
