Type: FOCUSED INSPECTION
Date: 07-APR-2026

2.31(c)(7)

Institutional Animal Care and Use Committee (IACUC).

Review of IACUC records, in addition to interviews with facility personnel and IACUC members, identified an instance where laboratory staff implemented significant changes to an ongoing protocol without prior review and approval by the IACUC. In November 2025, pigs undergoing a procedure in a toxicology study were to be monitored and given pain medication every 8-12 hours post procedure by laboratory personnel. However, records show that the administration of pain medication did not always occur at the frequency stated in the protocol. Specifically, laboratory personnel exceeded the 12-hour maximum stated in the protocol for 8 pigs during the study reportedly to prevent changes in behavior during observations. There was no indication of increased pain or discomfort noted by laboratory personnel for these 8 pigs and they received the pain medication twice daily as stated in the protocol, but the protocol was not followed as written and approved by the IACUC.

Performing activities not covered by IACUC-approved protocols can result in harm or death to the impacted animals. The regulations state that with respect to activities involving animals, the IACUC, as an agent of the research facility, shall review and approve, require modifications in (to secure approval), or withhold approval of proposed significant changes regarding the care and use of animals in ongoing activities.

This incident was identified by the facility prior to inspection and corrective measures were implemented. To remain corrected after April 7, 2026

2.32(c)

Personnel qualifications.

On June 25, 2025, an adverse event occurred in two dogs while undergoing a procedure for an approved protocol. The activity required administration of a test article either orally or intravenously. Two dogs received the test article intravenously and developed allergic reactions progressing to anaphylaxis. Both dogs were immediately treated by veterinary staff and recovered. An internal investigation determined that inexperienced laboratory personnel inadvertently administered the oral test article intravenously which resulted in the allergic reactions in both dogs. Failure to adequately train laboratory personnel may result in harm or death to animals in their care.

Inspection Report

It is the responsibility of the research facility to ensure that all personnel involved in animal use are adequately trained to perform their duties. Issues associated with staff training can affect animal health. The facility shall ensure that all personnel are sufficiently trained to conduct their duties.

Corrected prior to the inspection on April 7, 2026.

This inspection and exit interview were conducted with facility representatives.
