DAVID MADRIGAL

Type: ROUTINE INSPECTION
Date: 23-AUG-2026

3.15(a)(5)

Primary enclosures used to transport live dogs and cats.

The wire enclosures did not have handles attached to the cages. The registrant described how the cages were handled and because there were no handles attached to the cages, people handling the cages could possibly come into physical contact with the animal contained inside the cage. This could potentially cause harm to the handler or to the animal inside. Handles decrease this risk.

Unless the enclosure is permanently affixed to the conveyance, adequate devices such as handles or handholds are provided on its exterior, and enable the enclosure to be lifted without tilting it, and ensure that anyone handling the enclosure will not come into physical contact with the animal contained inside.

Correct by September 27, 2026.

3.15(a)(6)

Primary enclosures used to transport live dogs and cats.

None of the cages in the transport vehicle were marked on top and on one or more sides with the words "Live Animals" in letters at least 1 inch high, and with arrows indicating the correct upright position of the primary enclosure. This signage helps to ensure the correct positioning of the animal's enclosure.

Unless the enclosure is permanently affixed to the conveyance, it is clearly marked on top and on one or more sides with the words "Live Animals," in letters at least 1 inch (2.5 cm.) high, and with arrows or other markings to indicate the correct upright position of the primary enclosure.

Corrected on August 23, 2026, at the time of the inspection, and forward.

This inspection and exit interview were conducted with the registrant.
