& TECHNOLOGIES

Type: ROUTINE INSPECTION

Date: 26-MAR-2026

2.31(c)(7)

Institutional Animal Care and Use Committee (IACUC).

During recordkeeping review, a deviation from an approved IACUC study protocol was observed: the euthanasia procedure for cardiac perfusion under gas anesthesia indicates the animals will receive additional analgesia in the form of opioid injection after sedation and induction. Twelve cynomolgus macaques that were euthanized via perfusion on 12 January 2026 and 16 January 2026 (6 animals on each day) were not administered the listed opioids of either hydromorphone or morphine. A member of the veterinary care team stated that both drugs have not been on site and no controlled drug logs were available for review. The staff member stated there were no adverse events observed during the euthanasia perfusion procedure.

This activity constitutes a significant deviation from the approved activities in the protocol. Making significant changes to protocols without IACUC review and approval deprives the IACUC of the opportunity to provide oversight of animal activities and compliance with the Animal Welfare Act.

Principal investigators are to follow the IACUC approved protocols, and any proposed changes shall be reviewed and approved by the IACUC prior to implementation. Those carrying out procedures in an IACUC-approved protocol must adhere to what was approved by the IACUC.

Correct by 30 April 2026.

2.38(l)(2)

Miscellaneous.

The last two review dates of the contingency plan listed are 20 March 2026 and 14 August 2023, creating a review interval of greater than 1 year. Failure to review the contingency plan on at least an annual basis may result in outdated information and action plans that may negatively impact animal welfare during an emergency. The contingency plan must be reviewed by the research facility on at least an annual basis to ensure that it adequately addresses the criteria listed in paragraph (l)(1) and maintain annual review documentation. Contingency plans, as well as all annual review documentation, must be made available to APHIS upon request.

Inspection Report

Correct from this date forward of 30 March 2026.

3.82(d)

Feeding.

The metal food receptacles used for the marmosets that are stored in the common area are only cleaned and not sanitized between use according to facility representatives. The facility uses dish soap and water to clean the food receptacles. Not sanitizing food receptacles as described in this subpart may increase risk of disease transmission between animals.

Food receptacles must be kept clean and must be sanitized in accordance with the procedures listed in § 3.84(b)(3) of this subpart at least once every 2 weeks. Used food receptacles must be sanitized before they can be used to provide food to a different nonhuman primate or social grouping of nonhuman primates. Measures must be taken to ensure there is no molding, deterioration, contamination, or caking or wetting of food placed in self-feeders.

Correct by 31 March 2026.

This inspection and exit interview were conducted with the facility representatives.
