Type: ROUTINE INSPECTION
Date: 13-OCT-2026

3.80(a)(2)(ii)

Primary enclosures.

Toys placed inside the primary enclosure for one common marmoset are not being maintained in a way that protects the animal from injury. On the floor of the enclosure, there are multiple piles of stuffing from inside of a stuffed animal toy.

Damaged items can allow nonhuman primates access to inappropriate materials which can lead to illness or injury from ingestion. Primary enclosures must be constructed and maintained so that they protect the nonhuman primates from injury.
To be corrected by October 19, 2026.

3.84(a)

Cleaning, sanitization, housekeeping, and pest control.

The licensee is not spot cleaning two indoor marmoset enclosures daily.

In an indoor enclosure housing one common marmoset and an indoor enclosure housing one common marmoset and one black-tufted marmoset, there is an accumulation of excreta and food waste on the floor and surfaces. When the inspector asked when the last time the enclosure had been cleaned, the licensee stated that it had been about a week.

Failure to clean as often as necessary can lead to the buildup of feces, secretions, food waste, and debris which may attract insects or vermin, and increase the risk of disease transmission. Excreta and food waste must be removed from inside each indoor primary enclosure daily and from underneath them as often as necessary to prevent an excessive accumulation of feces and food waste, to prevent the nonhuman primates from becoming soiled, and to reduce disease hazards, insects, pests, and odors.
To be corrected by October 19, 2026.

This inspection and exit interview were conducted with the licensee.

You may appeal all or part of any inspection report by submitting a written statement contesting the findings—along with any supporting documentation—to the Deputy Administrator. Appeals of routine, focused, or attempted inspections must
