Type: ROUTINE INSPECTION

Date: 27-FEB-2026

2.31(c)(7)

Institutional Animal Care and Use Committee (IACUC).

The attending veterinarian notified the inspector that an IACUC approved protocol had not been followed by a principle investigator. The protocol covers training by the Animal Resources Program staff with various species housed at UAB. On February 9, 2026, two non-naïve rabbits (rabbits that have undergone procedures) were transferred to this protocol and used for a training lab. At the time of training, the protocol indicated that animals used would be naïve rabbits (rabbits that would not have undergone procedures prior to use on this protocol). A modification request for the use of non-naïve animals was under review but had not been approved by the IACUC at the time of the animal transfer. The IACUC determined that no animal welfare concerns occurred at the time of the training lab. The principle investigator has since been retrained and the modification to the protocol has now been approved. Failure to follow an approved protocol may adversely affect the health and well-being of the animals on the protocol. Implementing changes to protocols without IACUC review and approval prevents the IACUC from providing the necessary oversight of animal activities. The IACUC, as an agent of the research facility, shall review and approve, require modifications in (to secure approval) or withhold approval of proposed significant changes regarding the care and use of animals in ongoing activities. Corrected prior to the time of inspection on 2/27/2026.

2.33(b)(1)

Attending veterinarian and adequate veterinary care.

On February 26, 2026, two juvenile pigs underwent a surgical procedure during which they were placed under anesthesia and administered isoflurane from a vaporizer with an expired service date of October 2024. The use of equipment that has not been properly maintained may reduce effectiveness or lead to unintended outcomes. Animals may experience discomfort or distress resulting in unexpected side effects associated with anesthesia equipment that has not been adequately serviced. Each research facility shall establish and maintain programs of adequate veterinary care that include the availability of appropriate facilities, personnel, equipment and services to comply with the provisions of this subchapter. To be corrected from this date forward on 2/27/2026.

This inspection and exit interview were conducted with facility representatives.
