Certificate: **31-C-0289**

Site: 001

Hays for Zorses

Type: ROUTINE INSPECTION

Date: 23-FEB-2026

2.75(b)(1)

Records: Dealers and exhibitors.

The acquisition and disposition records available for review were not current or complete. The facility did not have the address of the individual who they acquired 2 emu from or the date of disposition of 2 pigs. An incomplete record of acquisitions and dispositions does not allow for proper traceability of regulated animals.

Complete records are needed for proper management of the regulated animals at a facility and those being brokered, acquired, held, and sold. Every exhibitor shall make, keep, and maintain records or forms which fully and correctly disclose information concerning animals other than dogs and cats, purchased or otherwise acquired, owned, held, leased, or otherwise in his or her possession or under his or her control, or which is transported, sold, euthanized, or otherwise disposed of by that dealer or exhibitor. The records shall include any offspring born or hatched of any animal while in his or her possession or under his or her control. Correct by ensuring the acquisition and disposition records concerning all regulated animals are current and complete. Correct by 10-MARCH-2026.

3.125(a)

Facilities, general.

The outdoor housing facilities are not being adequately maintained in good repair and do not protect the animals from injury. A primary enclosure currently housing 2 red foxes contains an elevated resting platform constructed of wood that was observed to have multiple holes. The holes measured approximately 2-6 inches in length. The enclosure also contains a wood ramp that was missing a large portion of wood from a sideboard, weakening the structural integrity of the ramp.

Failure to maintain the housing facilities in good repair or replace damaged structures could result in injury to the animals being housed in these enclosures. Correct by ensuring outdoor housing facilities are structurally sound and maintained in good repair to protect the animals from injury. Correct by 10-MARCH-2026.

Inspection Report

Supplies of food are not being stored in a manner to protect them from contamination. The facility utilizes a covered structure to store the hay used to feed the animals, including zebra and zebra/horse hybrid. This structure is located in a paddock that previously housed animals. In the back of this structure, the ground underneath and surrounding the hay bales was observed to contain too numerous to count pieces of dried manure from previous resident animals.

Exposure to fecal material could contaminate the feed with microorganisms and parasites leading to illness or disease transmission to the animals. The presence of excreta in the storage area also could also attract unwanted vermin and pests that could further contaminate the food supplies. Correct by ensuring that supplies of food are stored in a manner that adequately protects such supplies against deterioration, molding, or contamination by vermin. Correct by 10-MARCH-2026.

3.131(a)

Sanitation.

The facility is not adequately cleaning enclosures. In the barn, approximately three stalls used to house zebras contained an excessive accumulation of excreta on the walls. The excreta was thick, brown/black in color, and is located primarily on the back and lower sections of each stall. Accumulations of excreta can lead to contamination of the animals, may lead to spread of disease, and create odors. Excreta shall be removed from primary enclosures as often as necessary to prevent contamination of the animals contained therein and to minimize disease hazards and to reduce odors. Correct by ensuring that excreta is removed as often as necessary to prevent accumulation that may affect the animals. Correct by 10-MARCH-2026.

This inspection and exit interview were conducted with the facility representative.
