Type: ROUTINE INSPECTION

Date: 17-MAR-2026

2.131(e)

Direct

Handling of animals.

During inspection, one brown and white rabbit was found in the corner of an outdoor enclosure, shivering, and away from the other nine rabbits. The shivering was even more evident when the inspector put their hand on the rabbit's back and felt it trembling. The ambient temperature measured 35.8 degrees Fahrenheit (via the inspector's kestrel) at about 8 AM during this inspection. Last night, a freeze warning was in effect and reached a low of 29 degrees with a high temperature of 46 degrees today. Another freeze warning was issued for the evening of the inspection day, with a low temperature of 30 degrees expected, per WeatherBug. There was inadequate bedding and/or shelter provided within this enclosure for the climatic conditions. The entire floor of the enclosure was wet dirt, and most of the rabbits all had wet feet. Two plastic hutches, both circular shelters (appeared as upside-down buckets/planters approximately 2 feet in diameter), had wet dirt floors and one had two large holes on the top and on one side where it had cracked. A third hutch, a plastic outdoor rectangular doghouse (approximately 30 inches long by 18 inches wide) was caked with mud and excrement on its floor. Pop-up fabric tunnels, designed for indoor use, were also within the enclosure but only one fabric tunnel was intact and measured approximately 10 inches in diameter and 48 inches long with a secondary connecting "T" tunnel of approximately 12 inches. The intact fabric tunnel was uniformly wet along the floor area touching the ground and the three other fabric tunnels within the enclosure were in such disrepair, missing most of the fabric and tattered, they were non-functional and lying in pieces on the ground. The hutches provided were not adequate to keep this rabbit from being cold. One rabbit was affected at the time of the inspection, and the other nine rabbits were also at risk of being cold since the temperature was to drop below freezing the evening of the inspection day, per WeatherBug. Not taking appropriate measures to alleviate the impact of the freezing climatic conditions may be detrimental for the rabbits' overall health and well-being which could lead to illness as well as animal discomfort. Appropriate measures, such as more bedding, a heat source, and/or additional appropriate shelter, must be taken to alleviate the impact of the freezing temperatures on the rabbits so they may comfortably maintain their body temperature. Correct by end of day March 17, 2026.

A complete routine inspection was conducted starting on March 17, 2026. This inspection report is limited to the Direct noncompliance identified during that inspection. An additional inspection report will be delivered with any other noncompliant items identified during the inspection.

This inspection and exit interview for this direct noncompliance was conducted with the licensee.
