Type: ROUTINE INSPECTION

Date: 18-FEB-2026

2.40(a)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

In discussions with the AV, she was doing rounds on Tuesday Feb 17th and had informed the staff that a single penguin juvenile could not be housed in the kitchen prep area and should be moved back to penguin building. She also stated another two penguin chicks that were housed in a bin should be moved to the penguin holding area for husbandry purposes. During the inspection process on Wednesday Feb 18th, the juvenile penguin was housed in an office space, and the other two penguin chicks were housed in a black tub in a dark office at the encounter building. The facility did not follow guidance provided by the AV which negates the veterinary authority over the care and use of animals at the park.

Exhibitors shall assure that the attending veterinarian has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Correct Feb 20, 2026

2.131(c)(1) Critical

Handling of animals.

The facility has a walk-through aviary with approximately 100 budgies, where guests are allowed to roam throughout the aviary up to perching and nest boxes and feed budgies off a stick. When the park was open for the season, from approximately July 26- Oct 10, 2025, at least 10 budgies were stepped on by a guest or died of unidentified trauma. Frequently budgies will land on the ground and failure to maintain sufficient distance or barriers between the guests and the budgies led to being stepped on.

During public exhibition, any animal must be handled so there is minimal risk of harm to the animal and to the public, with sufficient distance and or barriers between the animal and the general viewing public so as to assure the safety of the animals and the public.

Inspection Report

Cleaning is not sufficient in the Baboon, squirrel monkey, and ring-tailed lemur enclosures. There is an accumulation of feces in and on the hide boxes, and along with the fire hoses used for climbing. There is excess debris trapped between the window and wire mesh in the baboon enclosure. These non human primate enclosures must be spot cleaned daily and to prevent this accumulation and to prevent the animals from becoming soiled. Methods and frequency of cleaning need to be addressed for the health of the animals.

Correct by: Feb 23, 2026

This inspection and exit interview were conducted with a facility representative.
