Type: ROUTINE INSPECTION

Date: 02-MAR-2026

2.38(f)(1)

Miscellaneous.

In June 2025, the facility misdosed 30 guinea pigs, which resulted in the study needing to be repeated. The facility intended for 30 animals to be dosed with test article #1 and a second group of 30 animals to be dosed with test article #2. The test article identification numbers on the vials were very similar to each other, so group #1 received test article #2 instead of test article #1. The error was quickly identified and the second group of 30 guinea pigs were then dosed with test article #1. The study continued without incident and the animals were handled per protocol. However, after thorough review, the study director, quality assurance team, and IACUC determined that the study would need to be repeated to meet regulatory documentation requirements. The studies were repeated with an additional 60 guinea pigs.

Due to this misdosing and unclear documentation, the facility was required to repeat the studies using an additional 60 guinea pigs that would not have been needed for these studies. Mishandling of study animals and test articles can have negative impacts to the animals, such as animal loss or unnecessary animal use.

Handling of all animals, including the administration of test articles to study animals, shall be done as expeditiously and carefully as possible.

Correct by March 25, 2026. The facility implemented corrective actions prior to inspection.

This inspection and exit interview were conducted with facility representatives.
