Type: ROUTINE INSPECTION

Date: 19-MAY-2026

3.78(d)

Outdoor housing facilities.

During inspection, APHIS Officials noticed the perimeter fence behind the area where the lemurs and monkeys are held is not three feet away from the primary enclosure. Moreover, where the perimeter fence reaches the Mandrill enclosure it joins the enclosure with no perimeter fence behind. Having a perimeter fence in place protects the animals in the facility by restricting animals and unauthorized persons from going through it or under it. Additionally, it serves as a secondary containment system for the animals in the facility.

An outdoor housing facility must be enclosed by a fence that is of sufficient height to keep unwanted species out. Fences less than 6 feet high must be approved by the Administrator. The fence must be constructed so that it protects nonhuman primates by restricting unauthorized humans, and animals the size of dogs, skunks, and raccoons from going through it or under it and having contact with the nonhuman primates. It must be of sufficient distance from the outside wall or fence of the primary enclosure to prevent physical contact between animals inside the enclosure and outside the perimeter fence. Such fences less than 3 feet in distance from the primary enclosure must be approved by the Administrator.

To be corrected by September 30, 2026.

3.125(a)

Repeat

Facilities, general.

During inspection, APHIS Officials saw multiple resting platforms with wooden boards that were worn and had multiple sharp and jagged edges. The resting platforms were been used by the tigers and the sharp and jagged edges can cause injury to the tigers. The facility must be constructed of such material and of such strength as appropriate for the animals involved. The indoor and outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury and to contain the animals.

This inspection and exit interview were conducted with Facility Representative.
