Type: ROUTINE INSPECTION

Date: 17-FEB-2026

3.127(d)

Repeat

Facilities, outdoor.

Five adult red kangaroos are housed in an outdoor primary enclosure that has no perimeter fence. The primary enclosure is made of a 6 foot high chain link fence. There is a row of conifer trees planted around this exterior of this fence, but no perimeter fence at least 6 feet high is present.

All outdoor housing facilities (i.e., facilities not entirely indoors) must be enclosed by a perimeter fence that is of sufficient height to keep animals and unauthorized persons out. Fences less than 8 feet high for potentially dangerous animals, such as, but not limited to, large felines (e.g., lions, tigers, leopards, cougars, etc.), bears, wolves, rhinoceros, and elephants, or less than 6 feet high for other animals must be approved in writing by the Administrator. The fence must be constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from going through it or under it and having contact with the animals in the facility, and so that it can function as a secondary containment system for the animals in the facility. It must be of sufficient distance from the outside of the primary enclosure to prevent physical contact between animals inside the enclosure and animals or persons outside the perimeter fence. Such fences less than 3 feet in distance from the primary enclosure must be approved in writing by the Administrator. The facility must have a perimeter fence appropriate for the species being housed, 6 feet high, or have an approved variance by the Administrator.

This inspection and exit interview were conducted with a facility representative.
