Type: ROUTINE INSPECTION
Date: 24-MAR-2026

2.40(b)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

The facility is not using appropriate methods to diagnose and treat diseases and injuries for their adult female emu.

The inspectors observed an adult female emu in an outdoor enclosure with two medical concerns.

** She had an area of complete feather loss on her back approximately 6 inches in length. Short pin feathers (new feather growth) were visible. The skin was pink.

** The emu also had a swelling on her left knee about 4 inches in diameter. The swelling appeared firm and the same color and texture as her skin (black).

According to facility representatives, the feather loss has been present for months and the swelling on the leg was observed about a week ago; the facility did not seek veterinary assessment or treatment for the conditions.

Failing to seek timely veterinary assessment and treatment is preventing the attending veterinarian from ensuring timely and adequate veterinary care for this animal.

This animal must be evaluated by a veterinarian for treatment and the facility must use appropriate methods to prevent, control, diagnose, and treat diseases and injuries, and ensure the availability of emergency, weekend, and holiday care.

Correction date: March 31, 2026.

3.129(b)

Feeding.

The food receptacles used to take feed to several animals housed outdoors (pigs, muntjac, sheep, goats, and bears) were not clean.

There was a thick layer of brown, odorous material on the bottom and the sides of the buckets. A representative stated it had been at least 10 days since the receptacles were cleaned.

Unsanitary food receptacles can contaminate the food and cause illnesses in the animals.
