Type: RE-LICENSE INSPECTION
Date: 24-APR-2026

2.40(b)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

A young brown and white goat was seen limping on its left front leg. It was seen to jump and climb and put weight on both front legs normally at times during inspection. This condition has not been reported to the attending veterinarian (AV) and isn't under treatment. Some causes for a limp can cause discomfort and a limping animal must be reported to the AV for evaluation and treatment. Ensure to have this goat evaluated by the AV and follow the treatment plan that the AV recommends.

3.125(a)

Repeat

Facilities, general.

The west fence line on the bison enclosure is in disrepair and is not attached very well to the supporting posts. A fence in disrepair and not attached to posts could cause injury or not contain them. Ensure that all enclosures are maintained in good repair to protect the animals from injury and to contain the animals.

3.130

Watering.

The bison water tank had what appeared to be mud and algae in the bottom of it. Mud and algae in a water receptacle are a sign that it is not being kept clean and sanitary. Unsanitary water receptacles can make animals sick. All water receptacles must be kept clean and sanitary.

3.153(a)(1)(i)

Repeat

Primary enclosures.

The duck enclosure has areas of loose wire points that ducks can touch. Also, they have a rusted barrel that has sharp edges on the bottom that ducks can contact. Rough/sharp edges and wire points could injure the ducks. Ensure to maintain bird enclosures free from sharp points and rusted edges.

Inspection Report

The water receptacle for peafowl had what appeared to be mud and algae on the bottom of the receptacle. Also, the ducks do not have a water receptacle to permit drinking of potable water (they have a pond with fresh-water flowing into it). For their health, birds must be provided with potable water to drink. Water receptacles must be kept clean and sanitized as often as necessary to keep them clean and free of contamination.

This was a 1st Re-License Inspection for a Class C license. The inspection and exit briefing were conducted with the applicant.

All items must be in compliance within 2 more inspection by June 23, 2026 or the applicant will forfeit the license fee and must wait 6 months to reapply. Please contact your inspector to schedule your next Re-License Inspection.

Regulated activity can continue under your existing USDA license until it expires.
