Type: ROUTINE INSPECTION
Date: 22-SEP-2026

3.125(a)

Facilities, general.

The facility failed to keep two zebras contained in their primary enclosure.

While traveling in New York, two zebras broke free of their primary enclosure and were found wandering in the circus parking lot inside the perimeter fence by the local police department. Police officers contacted facility representatives who were able to recapture the animals without injury. Failure to maintain primary enclosures can result in injury and distress to the animals.

Housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury and to contain the animals.

The facilites made corrective actions to prevent further escapes.

Correct by October 3, 2026

3.127(a)

Facilities, outdoor.

At the time of the inspection the facility failed to provide sufficient shade to three zebras.

The zebras primary enclosure was in direct sunlight with a small 10 foot by two foot area of shade that they shared with two horses. The ambient temperature was in the mid 90s. Failure to provide sufficient shade can cause overheating or discomfort. At the time of the inspection, the zebras did not show signs of heat distress.

When sunlight is likely to cause overheating or discomfort of the animals, sufficient shade by natural or artificial means shall be provided to allow all animals kept outdoors to protect themselves from direct sunlight.

The facility corrected it at the time of the inspection by moving their primary enclosure under a fully shaded area.
