Type: RE-LICENSE INSPECTION
Date: 08-MAY-2026

2.40(b)(3) Critical

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

The applicant did not perform, or communicate to the attending veterinarian, complete daily observations of a female adult armadillo to assess her health and well-being and the animal was found deceased.

On January 31, 2026, an adult 5-year old female armadillo was found deceased in her enclosure. The facility was not aware that the animal was critically ill. The following observations were not identified by the applicant:

** The animal's body condition had significantly decreased. According to medical records, she was previously "extremely overweight", with visible subcutaneous fat around the rear end according to the applicant. Upon necropsy, the animal was "very thin with very little if any subcutaneous/organ fat". The applicant also stated that upon picking the armadillo up after she was deceased, the applicant observed a noticeable difference in her weight.

** The necropsy record showed the stomach was "2/3 full of shavings" but did not appear obstructed by the bedding. The applicant did not notice the animal was eating her bedding.

The following observations were made by the applicant (according to records and verbal reports) but were not communicated to the veterinarian until the animal was found deceased:

** The animal's activity had been reduced for the past few months preceding her death and she had been sleeping more. This was unusual for her.

** The animal did not eat the large meal offered to her 7 days prior to her death or the large meal offered 3 days prior. The applicant reported that she ate some small snacks in between, however necropsy results showed no food in the intestines or stomach (only bedding).

The lack of complete daily observations and lack of timely communication with the attending veterinarian prevented opportunity for diagnosis or treatment of this condition before the animal had died.

Correct by: Ensuring there is daily observation of all animals to assess their health and well-being, and ensuring there is a mechanism of direct and frequent communication to the attending veterinarian so that timely and accurate information on problems of animal health, behavior, and well-being is conveyed.

Inspection Report

This is a 1st Re-License Inspection for a Class (C) License. The inspection and exit briefing were conducted with the applicant.

All items must be in compliance within 2 more inspections or by Tuesday July 7, 2026, or the applicant will forfeit the license fee and must wait 6 months to reapply. Please contact your inspector to schedule your next Re-License Inspection.

Regulated activity can continue under your existing USDA license until it expires.
