Certificate: **58-B-0709**

Site: 001

International Herpetology Center

Type: ROUTINE INSPECTION

Date: 03-SEP-2026

2.75(b)(2)

Records: Dealers and exhibitors.

The disposition records were incomplete. All records containing the required information must be maintained by the facility and be available at the time of inspection.

Record of Animals on Hand and Record of Acquisition, Disposition, or Transport of Animals are forms used by dealers and exhibitors to keep and maintain the information required by paragraph §2.75(b)(1). Correct by this day, September 3, 2026 forward.

3.11(b)(2)

Cleaning, sanitization, housekeeping, and pest control.

The facility failed to sanitize the primary enclosure for two domestic cats. The primary enclosure for two Bengal cats is covered in foliage, and the wooden beams and wire mesh is covered in algae. The licensee remarked he did not know he was supposed to sanitize the enclosure.

Sanitizing is important to prevent the accumulation and transmission of harmful bacteria, viruses, fungi, and parasites that threaten feline health. It reduces zoonotic risks associated with pathogens such as *Toxoplasma gondii* and *Salmonella*. Compliance requires daily spot cleaning and full sanitization every two weeks, and it's recommended to maintain documentation verifying adherence to these standards.

Used primary enclosures and food and water receptacles for dogs and cats must be sanitized at least once every 2 weeks using one of the methods prescribed in paragraph (b)(3) of this section, and more often if necessary to prevent an accumulation of dirt, debris, food waste, excreta, and other disease hazards. Correct by September 17, 2026.

This inspection and exit interview were conducted with the facility representative.
