Type: ROUTINE INSPECTION
Date: 22-APR-2026

3.78(d)

Outdoor housing facilities.

The new outdoor enclosure housing two capuchins does not have a sufficient perimeter fence. The only secondary fence for this enclosure is less than six feet in height and consists of four boards with large gaps between them.

An insufficient perimeter fence can allow unwanted animals or people to enter the facility and potentially harm the animals within. The perimeter fence must be constructed so that it protects nonhuman primates by restricting unauthorized humans, and animals the size of dogs, skunks, and raccoons from going through it or under it and having contact with the nonhuman primates. It must be of sufficient height (at least six feet high) to keep unwanted species out. It must be of sufficient distance (at least three feet) from the outside wall or fence of the primary enclosure to prevent physical contact between animals inside the enclosure and outside the perimeter fence.

To be corrected by July 1, 2026.

This inspection and exit interview were conducted with a facility representative.
