Type: ROUTINE INSPECTION
Date: 24-FEB-2026

2.40(b)(3)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

An older zebu cow was noted to have a stiff gait when walking, that the licensee had noticed a few days ago, but had not contacted the attending veterinarian. Failure to identify and communicate abnormal findings with the veterinarian in a timely manner, delays appropriate treatment and can cause undue pain and/or distress to the animals. Daily observation of all animals is necessary to assess their health and well-being. If any problems of animal health, behavior, or well-being are noted, they must be conveyed to the attending veterinarian in a timely and accurate manner to allow for appropriate diagnosis and treatment. This cow's condition must be conveyed to the veterinarian so they can determine the next steps for diagnosis and a treatment plan.

Correct by: 03/07/2026.

2.75(b)(1)

Records: Dealers and exhibitors.

The acquisition and disposition records available for review were not current or complete. The acquisition of animals obtained (peacocks, rhea, emu, nilgai) and those disposed of (pigs, water buffalo, cows, ostrich, African grey birds, budgies, barbary sheep, blackbuck, goats) are either missing all or part of the following: dates of acquisition or disposition, names and addresses of whom the animals were acquired from, USDA license number and/or Driver's license number. Other animals (pigs, goats, cows, zebu, and budgies) were born on property but not properly documented with full dates of birth. Without records which fully disclose the animal's acquisition as well as disposition information, legal and medical information traceback is not possible. The facility shall ensure that it makes, keeps, and maintains records which fully and correctly disclose the following information concerning all exhibition animals: name, address, and USDA number, if applicable, of the person from whom the animal was acquired from or given to, the date of the acquisition or disposition, the species and quantity of animals involved. The records shall include any offspring born of any animal while in his or her possession or under his or her control.

Correct by: 04/15/2026.

2.134(b)

Contingency planning.

There is no documentation maintained to indicate that an annual review of the contingency plan has been completed. The contingency plan must be reviewed by the facility on at least an annual basis to ensure that it adequately addresses all

required contingency-related criteria and that no updates or changes need to be made to the plan such as changes made as a result of any recent unforeseen circumstance or the addition of new species. The facility must maintain documentation of their contingency plan annual reviews including documenting any amendments or changes made since the previous year's review.

Correct by: 04/15/2026.

3.153(a)(1)(ii)

Primary enclosures.

Two separate primary indoor enclosures, one housing parakeets, and the other a Blue-fronted Amazon, each contained a live unprotected electrical cord, accessible to the birds, powering a heat lamp. Each live electrical cord spanned from its entry point into the primary enclosure for approximately a distance of 2 to 3 feet. Electrical cords pose a significant health risk to animals that may peck or perch on them. Primary enclosures must be constructed and maintained so that they protect the birds from injury.

Corrected at the time of inspection, and to stay corrected from this date, March 2, 2026, forward.

3.154

Environment enhancement to promote psychological well-being.

At the time of inspection, the facility did not provide an adequately detailed species-specific environmental enhancement plan for all the birds on hand. The facility has acquired ostriches, peacocks, and a rhea, since the last inspection, but they were not included in the provided enrichment plan. A written plan addressing the specific needs of the varied species is necessary to ensure that the overall health, well-being, and psychological needs of the birds are being appropriately met. The facility must develop, document, and follow a species-appropriate plan for environment enhancement adequate to promote the psychological well-being of the birds. The plan must be approved by the attending veterinarian and must address social grouping, environmental enrichment, special considerations, restraint devices, and exemptions.

Correct by: 04/15/2026.

3.154(c)(4)

Environment enhancement to promote psychological well-being.

An African Grey parrot was singly housed within the main store, adjacent to and across the parking lot from the safari, unable to see or hear other birds. A special consideration enrichment plan was not specifically implemented or documented for this individually housed social bird. Without such a plan, this bird may develop abnormal behaviors and could experience psychological distress. The facility must implement an adequate enrichment plan per the attending veterinarian's instructions for all the birds, including special attention regarding enhancement of the environment of those individually housed social species of birds that are unable to see and hear birds of their own or compatible species.

Correct by 04/15/2026.

3.158(a)(1)

Cleaning, sanitization, housekeeping, and pest control.

The following indoor primary enclosures needed cleaning to remove excess accumulations of excreta:

- In the African Grey parrot's primary enclosure, the available perches were mostly covered in a layer of accumulated and dried excrement, especially around the food and water receptacles. In the tray below the enclosure, was a large

Inspection Report

accumulation food waste and excreta.

- In the parakeet aviary, both long wooden perches spanning the width of the aviary had a layer of dried excrement covering not only most of the top resting surface, but also down the sides of the perches. Excreta and food waste had further accumulated along the horizontal wood beams that provided part of the frame of the wire enclosure, closest to the barn walkway.

Regular cleaning is necessary to prevent soiling of the birds and to reduce disease hazards, insects, pests, and odors. Excreta, debris, and food waste shall be removed from primary enclosures and from under and around primary enclosures as often as necessary to prevent excessive accumulations.

Correct by 03/15/2026.

This inspection and exit interview were conducted with the licensee.
