Certificate: **56-C-0281**
Site: 002
Wildlife Geeks

Type: ROUTINE INSPECTION
Date: 17-FEB-2026

3.80(a)(2)(ix)

Primary enclosures.

The interior sides of the outdoor housing and shelter structure used to house one Ring-Tailed lemur had areas of unsealed wooden boards present. In addition, the lemur had access to a smaller metal cage, where surfaces throughout its frame has began to rust. The facility representative informed the inspector they'd noticed these surfaces as well, with plans to repair the metal cage soon.

Unsealed surfaces are difficult to effectively clean and sanitize, and do not prevent the absorption of liquids and moisture. Surfaces that nonhuman primates come into contact with must be able to be readily cleaned and sanitized, or replaced when worn or soiled.

Correct by March 9, 2026.

This inspection and exit interview were conducted with the facility representative and licensee.
