Type: ROUTINE INSPECTION

Date: 22-JAN-2026

2.40(b)(4) Critical

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

On 12/23/2025 facility personnel were not given adequate guidance on the care of animals regarding handling and anesthesia of two wallabies. On 12/23/2025 a male wallaby (Bucky) and a Female wallaby (Eloise) were anesthetized for routine veterinary medical examination procedures. At the time of this procedure both wallabies were given a vitamin E and selenium combination product as a prevention for capture myopathy. Bucky was administered selenium at a dosage of 0.84 mg/kg. Eloise was administered selenium at a dosage of 0.83 mg/kg. Before administration of the selenium containing product, a staff veterinarian verified that the calculated dosage to be administered was correct. However, according to facility protocol the dosage that should have been administered was 0.076 mg/kg for Bucky and 0.076 mg/kg for Eloise. The two wallabies died on 12/24/2025. Liver samples taken post-mortem and tested for selenium showed concentrations of 16.42 ug/g for Bucky and 16.05 ug/g for Eloise. The cause of the two wallabies' death was determined to be selenium toxicosis.

The administration of proper dosages of medication is important to the health and well-being of the animals being cared for.

Each exhibitor shall establish and maintain programs of adequate veterinary care that include adequate guidance to personnel involved in the care and use of animals regarding handling, immobilization, anesthesia, analgesia, tranquilization, and euthanasia.

To be corrected from this day (1/23/2026) forward.

This inspection and exit interview were conducted with facility representatives.
