Site: 001
John Zook

Type: ROUTINE INSPECTION
Date: 08-OCT-2026

3.11(c)

Cleaning, sanitization, housekeeping, and pest control.

The facility's grooming room is in need of cleaning and general housekeeping. There was a heavy accumulation of dust on storage shelves, boxes, miscellaneous items and tables in the room, including a table with medications and other medical supplies. Several cobwebs were observed along the walls, in corners, and near shelves and tables including one approximately 2ft X 2ft in size. In a corner of the room near a door, there was an open bag of shredded paper bedding with loose pieces accumulated in a pile covering approximately 3ft X 4ft of floor space. Failure to adequately clean animal use areas or any supply storage areas may attract unwanted rodents or other pests and contribute to the spread of disease or illness. Premises where housing facilities are located, including surrounding buildings and surrounding grounds, and other animal areas must be kept and in good repair to protect the animals from injury, to prevent the harborage of pests, and to facilitate the husbandry practices required in this subpart. A system of maintaining effective housekeeping practices must be in place to protect the health and well-being of the animals.

Correct by 10/29/2026.

3.13(a)(3)

Veterinary care for dogs.

The licensee has not been following the attending veterinarian's approved schedule for the sampling of parasites and other pests for dogs. According to the facility's Program of Veterinary Care (PVC) for Dogs, 1-3 adult dogs will be tested each year for heartworm disease, and 1-3 adult dogs will have a fecal float annually. The last documented heartworm test results and fecal test results were over 2 years ago, 07/29/2024. Failure to conduct sampling and treatment for parasites and other pests in accordance with the attending veterinarian's approved schedule can expose the animals to increased disease risk and can delay treatment. The licensee must ensure that sampling and treatment of parasites and other pests (including fleas, worms, coccidia, giardia, and heartworm) are followed in accordance with the schedule approved by the attending veterinarian.

Correct by 10/29/2026.
