Type: ROUTINE INSPECTION

Date: 01-APR-2026

3.80(a)(2)(ii)

Primary enclosures.

An unguarded electrical cord for a heating element was within the outdoor primary enclosure for 2 adult ring-tail lemurs. The cord was plugged into an extension cord but not plugged into the wall at the time of inspection. Electrical cords within the primary enclosure may result in adverse events such as electrocution, entanglement, or strangulation. Primary enclosures must be constructed and maintained so that they protect the nonhuman primates from injury.

Correct by facility at the time of inspection April 1, 2026.

3.125(a)

Facilities, general.

The USDA inspector noted 2 issues with the domestic goat enclosures.

-During the inspection 2 juvenile goats exited the enclosure going through the wire panel. The inspector measured the opening that the goats used at 6 inches X 8 inches. The fence in this area was insufficient to contain the animals securely.

-There was a supplemental area of fencing that had been applied to the enclosure. This supplemental fencing had become damaged and bent. This led to singular wires pointing into the animal space at the level of the goats. The fence not being maintained in good repair allowed for sharp points that can present a potential for injury.

The facilities must be constructed of such material and of such strength as appropriate for the animals involved. The outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury and to contain the animals.

Correct by April 16, 2026

This inspection and exit interview were conducted with a facility representative.
