Type: ROUTINE INSPECTION
Date: 31-MAR-2026

2.31(c)(3)

Institutional Animal Care and Use Committee (IACUC).

On inspection, a dietary product manufactured by "TestDiet" labelled "P Primate Tab Banana 190mg" was found in the food storage refrigerator. The product had a documented opened on date of September 13, 2022. Staff did not believe that the product was not currently being provided to the animals and discarded it on 31 March, 2026. Upon review of the report of the semiannual facility review dated October 2, 2025, the facility had documented a deficiency regarding the above-mentioned product found during their inspection with a provided correction date of October 21, 2025, but the product had not been discarded. Failure to correct observed deficiencies could lead to potential adverse animal welfare conditions. If program or facility deficiencies are noted, the reports must contain a reasonable and specific plan and schedule with dates for correcting each deficiency.

Correct from this date forward, 3 April 2026

3.80(a)(1)

Primary enclosures.

In an animal room, an ~4.3 square foot enclosure housing a mother and 7 month old infant cynomolgus macaque, one of the welded bars was no longer in good repair and was bent into the enclosure. Especially with an infant, the missing wire created dangerous gaps for the size of the animals housed therein. Facility immediately confined the pair to the other side of the pair of enclosures and subsequently changed out the enclosure. Primary enclosures must be designed and constructed of suitable materials so that they are structurally sound for the species of nonhuman primates contained in them and kept in good repair.

Corrected during inspection on 31 March, 2026

3.80(b)(4)

Primary enclosures.

In at least two enclosures, two macaques greater than 6 months of age were housed together in a single enclosure providing ~4.3 feet of space when each animal needs 4.3 feet of floor space. The mother and 7 month old infant were moved into one enclosure because of the damaged enclosure and another pair were together in an ~4.3 square foot

Inspection Report

enclosure. Primary enclosures must meet the minimum space requirements, which is 4.3 square feet for animals between 3-10 kgs. When more than one nonhuman primate is housed in a primary enclosure, the minimum space requirement for the enclosure is the sum of the minimum floor space required for each individual nonhuman primate housed in the enclosure.

Corrected during inspection on 31 March, 2026

This inspection and exit interview were conducted with the interim site manager.
